## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claims 1 and 6, the term “the inner side” is indefinite as it lacks clear antecedent basis. Also are two front surface ground knit constructions and two back surface ground knit constructions being claimed? Or is applicant claims two front surface ground knit constructions and only one back ground knit construction? Additionally, it is unclear as to which of the ground knit constructions are being interconnected by the connection yarns.

Re claim 3, the recitation “course direction and/or well direction” is an indefinite alternative recitation. Also it is unclear as to what is a “well direction”. Is this a wale direction?

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato et al.

(4787219)

Art Unit: 3765

The disclosure of Sato et al. (4787219) teaches the three dimensionally constructed knit fabric as claimed including two front-surface (1) and back-surface ground knit (1') constructions and connection yarns (2) interconnecting the two front-surface and back-surface ground knit constructions, the three-dimensionally constructed warp knit fabric characterized by comprising insertion yarns (3) between the connection yarns, wherein the insertion yarn is fixed along the inner side of the back-surface ground knit construction.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al. (4787219).

The disclosure of Sato et al. (4787219) teaches the invention substantially as claimed as indicated above in the rejection to claim 1. The disclosure of Sato et al. (4787219) does not set forth the specific fineness and insertion density of claims 4 and 5. It would have been obvious at the time the invention was made to choose from a number of different yarn fineness and insertion densities including 334-8400 dtex and .006-.4g/cm<sup>2</sup> since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.
